## **AMENDMENTS TO THE CLAIMS:**

This listing of claims will replace all prior versions and listings of claims in the application:

Claims 1-10. (Canceled)

Claim 11. (Currently Amended) A jukebox system, comprising:

a plurality of jukebox devices, wherein each jukebox device includes a microprocessor, a storage device for storing audiovisual information that can be reproduced by the jukebox device in response to user requests, an audio system for playing audio, a display device for displaying video, and a communication system for enabling the jukebox to communicate through an audiovisual distribution network;

a server remote to said jukebox devices that provides services to said jukebox devices, wherein said server and each of said jukebox devices can communicate with each other through said distribution network; and

a plurality of remote control devices for said jukebox devices, <u>wherein</u> each of said remote <u>control devices</u>:

comprising comprises a remote transmitter that is associated with a receiver connected to a control circuit of a one of said jukebox deviced evices; and

a specific key that, when actuated, triggers a signal comprising a remote control identification code which facilitates the storing of this remote control identification code as a saved remote control identification code by the jukebox, each

remote control device operable to transmit a plurality of key codes for controlling a plurality of functions of a jukebox device; and

being is operable to control one of said jukebox devices only when said jukebox device recognizes a control eode signal comprising a defined remote control identification code identifying the remote control device, stored on the remote control device and transmitted from the remote control device, wherein the control signal further comprises a key code sent to control a selected feature of the jukebox;

wherein at least one jukebox of said plurality of jukebox devices further comprising comprises:

a-remote control code storage mechanism that stores a <u>saved</u> remote control device identification code sent by <u>the an</u> associated remote control device;

a-server code storage mechanism that stores a server identification code sent by the server connected to said plurality of jukebox devices, said server identification code identifying another remote control device; and

a storage location that stores the defined transmitted remote control identification code for use in comparing the control code comprising the saved remote control device identification code and/or the server identification code with the defined transmitted remote control identification code stored on the jukebox to determine whether or not the jukebox will respond to control codes signals from the remote control transmitting the remote control identification code;

signal comprising only said defined identification code which facilitates the storing of this defined identification code by the jukebox on the first use of the remote control unit, each remote control device being provided for controlling a plurality of functions of a jukebox device.

Claim 12. (Currently Amended) The jukebox system of claim 11, wherein each of said jukebox devices jukeboxes include a learning mode that enables the remote control identification code to be obtained from the remote control when the specific key is actuated and to be stored on the jukebox as the saved remote control identification code.

Claim 13. (Currently Amended) The jukebox <u>system device</u> of claim 11, wherein the remote control is operable to activate and deactivate the <u>associated</u> jukebox device.

Claim 14. (Currently Amended) The jukebox system device of claim 11, wherein the remote control is operable to activate and deactivate a payment device on the associated jukebox device.

Claim 15. (Currently Amended) The jukebox <u>system device</u> of claim 12, wherein the learning mode is incorporated into an operating system of the jukebox device, this

NATHAN Appl. No. 09/357,764 October 19, 2006

learning mode being triggered by touching a special button displayed on the display device of the jukebox device.

Claim 16. (Cancelled)
